Footbath Length: 62.5" (overall)
Footbath Width: 22.5"
Footbath Height; 5.5"
Capacity (full); 81Ltr

10Ft x 3Ft Galvanised Footbath System.

Length;	120"
Width;	36"
Depth (footbath)	8"
Height to top rail;	36"

This footbath was designed for the zinc sulphate solutions similar to 'Golden Hoof' foot rot treatment for sheep. The fully galvanised unit incorporates an eight inch deep galvanised steel footbath with 2089 expanded metal sheep mesh for a non slip surface. The system is easily dismantled into three sections to take up minimal space when transporting or storing.

The footbath which is now made from 2mm thick steel is designed to hold approximately eight sheep for around two to three minutes while the solution gets to work.

When located correctly the bath is strong enough for other livestock. The system can be used for stand in solutions or for walk through treatments and can be linked up to the rest of our handling equipment by using the standard hurdle mounting brackets located at each end post.

Can be ordered with the option of a guillotine gate for the entrance into the pen.

10Ft x 3Ft Plastic Footbath System.

This footbath system is designed for use with the zinc sulphate / stand-in solutions. The bath comes in 5 parts for easy transport and set up in a matter of minutes.

The main bath is a Paxton 10Ft x 3Ft FB4 cattle bath with a narrow criss-cross rib pattern on the base which has been found to be actually best suited for sheep.

Heavy duty solid sheeted hurdles with footbath support brackets to stop the bath being moved around inside the framework, and railed swinging gates in frames for the entrance / exist gates.

All gates and hurdles are independently joined so they are easily moved around by one person and are suitable for many other uses.

Can be purchased with the upgraded option of a Guillotine Gate entrance gate or exit gate.

Agents Stamp.
